PROFESSIONAL SUMMARY

Full Stack Applied AI Engineer with 3 years of experience in Mobile Development, AI Engineering, and Backend Systems. Specialized in production-grade Flutter apps (Android & iOS), agentic AI systems with LangChain/LangGraph, and scalable Databricks-powered data platforms. Delivered PEN-tested, AWS-compliant deployments with RAG pipelines, multi-agent orchestration, and LLM integration across enterprise clients.

TECHNICAL SKILLS

Frontend: Flutter, Dart, Android (Kotlin), iOS (Swift), TypeScript, JavaScript, HTML/CSS, Bootstrap, Material UI

AI & Agentic: LangChain, LangGraph, RAG Pipelines, LLM Integration (Claude, Llama, Bedrock), Prompt Engineering, Multi-Agent Orchestration, HITL, AWS Bedrock

Backend: Python, GO, FastAPI, Flask, REST API, Microservices, AWS Lambda, AWS SQS, Docker, OpenTelemetry, Serverless, Event-Driven, SOLID Principles, Clean Architecture

Databricks: Databricks Apps, Serving Endpoints, Lakebase, SQL Warehouse, Job Pipelines, Notebooks

Databases: PostgreSQL, MySQL, Firebase, Redis, MongoDB

Cloud & Security: AWS (Lambda, Bedrock, Inspector, Connect, Nova Sonic), CI/CD, PEN Testing, FreeRASP, JWT, Microsoft AD

PROFESSIONAL EXPERIENCE

AI Engineer & Backend Developer + Technical Lead | AVASOFT, Chennai *May 2025 – Present*

- Built and deployed agentic AI systems, RAG-based pipelines, and enterprise chatbot platforms; led sprint planning, code reviews, and cross-functional delivery alignment.
- Engineered GO and Python backends with high-throughput API design; integrated AWS Lambda, Bedrock, Connect, and Nova Sonic for serverless AI workflows and voice automation.
- Developed scalable Databricks applications with Serving Endpoints, Lakebase, and SQL Warehouse for ML model delivery and large-scale data processing.
- Evaluated and benchmarked multiple LLM models (Claude, Llama, Bedrock) for client use cases, recommending optimal models based on cost, latency, and accuracy tradeoffs.
- Collaborated directly with enterprise clients to translate business requirements into AI system designs, ensuring alignment between technical delivery and business outcomes.
- Enforced security-first practices via AWS Inspector checks, load testing, and compliance validation across all production deployments.

Tech: Python, GO, LangChain, LangGraph, OpenTelemetry, RAG, AWS Bedrock, Lambda, SQS, Elastic Beanstalk, Databricks, MongoDB, PostgreSQL

Mobile Application Developer | AVASOFT, Chennai *Jul 2023 – May 2025*

- Shipped production Flutter apps across Android and iOS for finance, healthcare, food delivery, and enterprise clients; managed full Play Store and App Store release lifecycle.
- Implemented platform-specific integrations including Siri (iOS), In-App Purchases, and led Kotlin Multiplatform (KMP) migrations ensuring full feature parity across Android and iOS.
- Applied FreeRASP for runtime security hardening and conducted PEN testing resulting in zero reported vulnerabilities.
- Mentored junior developers on clean architecture, SOLID principles, Play Store and App Store guidelines, security patterns, and AI integration patterns, raising team code quality and delivery velocity.
- Collaborated with design, backend, and QA teams to deliver high-quality, maintainable mobile codebases across multiple concurrent client projects.

Tech: Flutter, Dart, Kotlin, Swift, Firebase, REST APIs, FreeRASP, GO

PROJECTS

Seiren | AVASOFT

AI-powered finance app with RAG pipeline, GO backend (90+ endpoints), and Flutter frontend — live on App Store and Google Play.

- Built a RAG pipeline querying directly from the database for context-aware financial insights; engineered a high-throughput GO backend with 90+ endpoints supporting scalable Android and iOS consumption.
- Implemented In-App Purchases for monetization, Siri integration for hands-free intent handling, and FreeRASP runtime protection — achieving zero PEN-test vulnerabilities on production release.

MODE | AVASOFT

Production-grade Databricks app with GO and Python, architected for enterprise-scale horizontal scalability under high user concurrency.

- Designed backend on Databricks Serving Endpoints and frontend on Databricks Apps; conducted load testing to validate enterprise-scale concurrency and delivered a GO-based release with significantly improved throughput.
- Optimized data pipelines and serving infrastructure to handle growing user base demands while maintaining low-latency response times across all endpoints.

State Street | AVASOFT

Proof-of-concept Databricks automation pipeline for large-scale equity data processing, featuring a dual-layer rule-based and agentic AI architecture.

- Designed a dual-layer architecture combining deterministic rule-based processing with an agentic AI layer for intelligent decision handling using SQL Warehouse and Databricks Apps.
- Successfully demonstrated end-to-end automation viability for large-scale equity data workflows; validated production readiness with a full enterprise deployment roadmap planned for State Street.

Coast Tech | AVASOFT

Enterprise platform that auto-generates production-ready, domain-specific chatbots from a knowledge base and target webpage using RAG and AWS Bedrock.

- Architected a RAG pipeline for automatic content ingestion and contextual retrieval layer deployment; eliminated manual bot development overhead, enabling rapid chatbot rollout at enterprise scale.
- Implemented robust security controls, access management, and compliance safeguards for enterprise-grade chatbot deployments handling sensitive organizational data.

City Twig (Phase 2-4) | AVASOFT

Multi-phase financial intelligence platform with RAG chatbot, dynamic graph generation, document comparison, and agentic Q&A on Python, MongoDB, and PostgreSQL.

- Built a RAG chatbot enabling users to query, calculate, and visualize financial data via dynamically generated graphs; developed an insurance document comparison tool for annual pricing analysis producing consolidated summary reports.
- Delivered an agentic conversation layer for open-ended financial Q&A and visualisation of financial data alongside robust document management workflows with smooth upload, delete, and retrieval operations.

Flashfood | AVASOFT

Live production food delivery app with active Android and iOS development — available on Play Store and App Store across multiple markets.

- Shipped 12 consecutive App Store release cycles maintaining version stability and seamless user experience; drove 2 Android releases during an active Swift-to-Kotlin (KMP) platform migration.
- Ensured full feature parity throughout the KMP migration by coordinating closely with backend and QA teams, delivering a stable cross-platform codebase ready for long-term scalability.

HelpDesk AI | AVASOFT

Production-ready multi-agent Help Desk system with a central orchestrator coordinating HR, Finance, and IT agents built with LangChain, LangGraph, and Claude.

- Designed a central orchestrator agent coordinating 3 specialized agents across HR, Finance, and IT domains; implemented Human-in-the-Loop (HITL) approval pipelines ensuring controlled, auditable AI decision-making.
- Integrated OpenTelemetry for full observability and real-time tracing across all agent interactions, enabling rapid debugging and performance monitoring in the multi-agent orchestration flow.

NextUp | AVASOFT

Python ML application for analyzing and validating athletic jump performance using advanced graph analysis and real image processing pipelines.

- Implemented multi-scenario testing pipelines with advanced prompt engineering to accurately handle multiple jump types; delivered AI-driven jump validity scoring and performance metrics using graph and image analysis.
- Ensured proper alignment and validity assessment across all jump scenarios through rigorous testing and prompt optimization, producing reliable performance insights across recorded athletic sessions.

EDUCATION

B.Tech – Electronics and Communication Engineering (IoT Specialization)

May 2023

Karunya Institute of Technology and Sciences, Coimbatore
